

ON-SITE WATER UTILITY PARTNER · SOUTH AFRICA

Water security without the infrastructure burden

INALA finances, owns and operates a dedicated water plant on your site.

You pay for the water it delivers.

WHAT WE DELIVER

Industrial effluent
reuse

Wastewater
treatment & reuse

Borehole to
drinking water

Seawater & brackish
desalination

THE CHALLENGE

Water has become a business continuity issue

Reliable water is operationally critical. Securing it yourself means taking on capital, maintenance, compliance and performance risk.

Supply

Can your operation tolerate interruption or inconsistent supply?

Infrastructure

Who owns, maintains and replaces the boreholes, tanks, treatment systems and pumps?

Capital

Should your business tie up its own capital in water infrastructure?

Accountability

Who answers for performance and compliance, year after year?

Securing your water shouldn't mean becoming a water utility.

THE INALA MODEL

One plant. One agreement. One accountable partner.

We build a new plant for your site, or acquire your existing plant and bring it up to standard. INALA owns it, operates it and answers for its performance under a long-term water offtake agreement.

INALA takes on

- ✓ Capital and asset ownership
- ✓ Development and engineering
- ✓ Operation and maintenance
- ✓ Long-term accountability for performance

You get

- ✓ Water as a contracted service
- ✓ Zero capital outlay
- ✓ One counterparty
- ✓ Remedies written into the contract

The agreement (typically 15 years) sets the service levels and states exactly what we owe you when we miss.

HOW WE WORK

From first assessment to every litre delivered

WHERE WE WORK

Built for operations where water can't fail

We step in where reliable supply, reuse, compliance or resilience has become a business requirement.

TRACK RECORD

Our on-site water infrastructure at work

3

Contracted projects and growing
8 qualified projects in development

1,000+

 kl/day

Contracted capacity

3

Provinces

Beverage manufacturer 250 kl/day

New plant treating high-strength effluent for reuse on site: DAF, a biological stage and a membrane bioreactor. 15-year water offtake agreement.

Residential estate 150 kl/day

Existing MBBR wastewater works acquired from the estate and being brought up to standard. INALA owns and operates it.

Commercial property portfolio 726 kl/day · 10 sites

Containerised plants treating groundwater to SANS 241 drinking-water standard. Pilot first, then 8–12 weeks per site.

WHO WE ARE

A specialist platform behind one counterparty

CAPITAL

Oasis Water Platform

Holding company. Owns INALA and allocates the required capital.

YOUR COUNTERPARTY

INALA Water Investments

Signs your agreement and owns the plant. Wholly owned by Oasis Water Platform.

ENGINEERING

Our development and engineering partner

Originates and engineers assets; supervises construction and operation.

Water you can count on starts with a conversation

Send us your site location and approximate daily volume in kilolitres, so we can respond usefully the first time.

1

We reply

within two business days.

2

Engineering assessment

Water balance and site assessment, if the site looks viable.

3

A priced offer

Structured and presented if the assessment holds up.
